With the support of IMPETUS, we are thrilled to integrate citizen science principles into our neighborhood's disaster preparedness efforts.

## Summary

The Antiquake project, a part of IMPETUS's Citizen Science with and for Communities challenge, aims to enhance community resilience to earthquakes in Kuzguncuk, Istanbul, through citizen science and community engagement. It involves developing customised risk mapping and disaster reduction plans, raising awareness, and fostering collaboration among stakeholders. By leveraging local knowledge and resources, the project aims to empower communities to effectively prepare for and respond to the unavoidable Istanbul earthquake. Through training programs, data collection campaigns, and outreach activities, the project seeks to mobilise diverse stakeholders, including residents, community organisations, and local authorities. By integrating neighbourhood social capital and promoting inclusivity, the project aims to create sustainable risk reduction measures and improve disaster management capacities. Ultimately, the project strives to build a resilient community capable of mitigating the impacts of earthquakes and fostering long-term disaster preparedness and response efforts in the region.
