Citizen Science transforming standards of care for Parkinson

## Summary

PAIR is a co-created project involving Parkinson's patients and researchers from the Vall d'Hebron Research Institute (VHIR). This project includes an Intergenerational Service and Learning (SaL) pilot program, bringing together high-school students and Parkinson's patients. The aim is to gather data and analyze whether intergenerational care can improve disease outcomes and patient well-being.

Students will work with researchers to develop questionnaires that assess the impact of the program on Parkinson's patients. Additionally, the project will evaluate the benefits and impacts on the students, focusing on their attitudes, behaviors, confidence, knowledge of Parkinson's disease, and competencies in science and research.

The project will take place in the El Carmel neighborhood of Barcelona during the 2024-2025 school year.
