## Institution/Organisation

Individual Association

## Website

[www.retasty.nl](http://www.retasty.nl)

## Social Media

[@RE-TASTY Citizen Science Project](#)

Citizen science allows students to investigate their school environments, acquire research skills and have a voice to change.

## Summary

In this second phase of RE-TASTY, the aim is three-fold: Firstly, aiming to reach different cultural and educational environments, RE-TASTY will be implemented with secondary students in Cyprus (the first phase was implemented in The Netherlands).

The students will use the Whole School Approach to focus on the food-related footprint of their school. Secondly, aiming to increase the bottom-up character of the project, we would like to investigate more deeply, through student focus groups, the specific concerns and perspectives of the students on the topic of food sustainability. Thirdly, the project aims to increase its connection with the school communities by enhancing its communication and dissemination activities. We are hoping to bring RE-TASTY closer to students, teachers, school management, as well as to other school-related stakeholders.
